HOW DOES MEGATOKEN WORK?

MEGATOKEN works by taking a 10% fee on every transaction. That fee is broken up into 3 parts. Reflection – 50% of the fee (5% of the transaction) is distributed to every wallet that holds MEGATOKEN on a percentage basis.

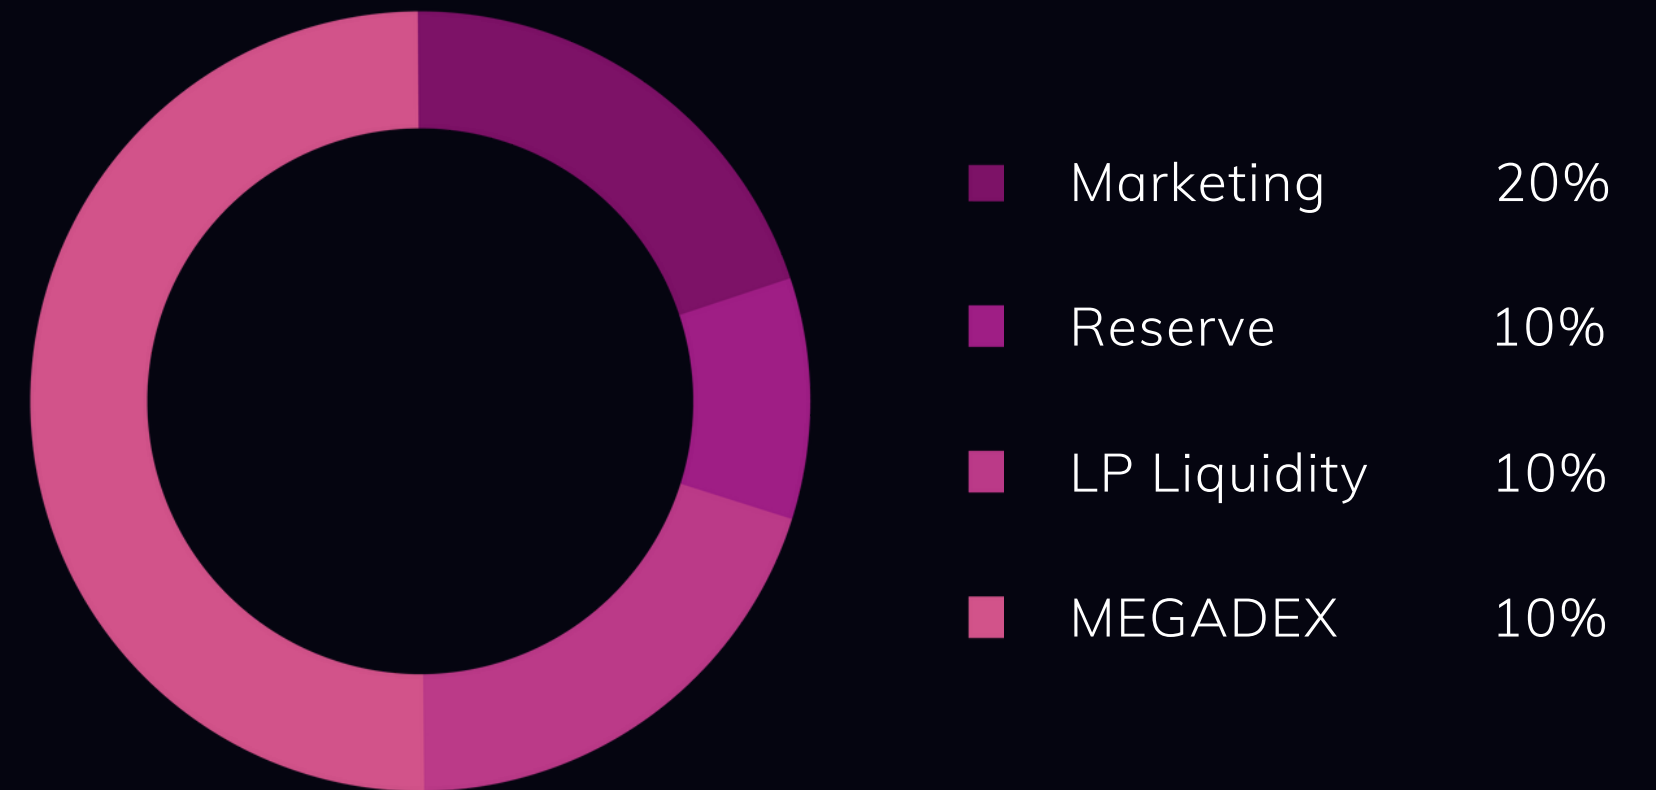

The more MEGATOKEN you hold the more you will receive! LP Generation – 20% of the fee (2% of the transaction) collected in MEGATOKEN is sold into BNB. That BNB is paired up with the remaining 20% of MEGATOKEN and deposited back into a liquidity pool. These two functions work together to reward holders and punish whales. And the Last part 10% of the fee (1% of the transaction) is Automatically Burned. This **AUTOMATIC BURN** will slowly deteriorate the supply of MEGATOKEN with every trade!

TOKEN ALLOCATION SUMMARY

MEGATOKEN is a cryptocurrency and worldwide payment system. It is decentralized digital currency, as the system works without a central bank or single administrator.

The network is peer-to-peer and transactions take place between users directly, without an intermediary. These transactions are verified by network nodes through the use of cryptography and recorded in a public distributed ledger called a blockchain.
